

blue **MAX** 950 Industrial Fan

Powerful Industrial Fan!

The **blueMAX** 950 fan is an exception to most air moving products in the market. With its massive airflow performance and manoeuvrability, its prime application is to operate where large volumes of air are required.

Besides offering a cooling solution, the **blueMAX** 950 doubles up as an extractor fan for use in warehouses, factories, bakeries, mills, foundries and more uniquely on the London Underground (LUL) tunnel network, where its performance is needed to dissipate excess amounts of fumes, dust, water vapour and other unwanted materials.

An extremely powerful motor combined with an aggressively pitched multi blade fan, enables this machine to generate massive volumes of air for long distance effect.

The robust structured high density polyethylene resin body is high impact resistant and is fitted with a fine mesh grills, making it safe to operate in public & commercial spaces.
